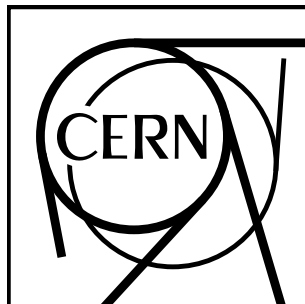

Figure 1: This is an example figure.

1 Introduction

This is where you should put the body of your paper. You should feel free to structure it into separate files if you want. Please keep in mind the following recommendations and suggestions:

- If in doubt about editing guidelines and recommendations, please refer to the Editorial Board guidelines that can be found at [?].
- Bibtex is strongly preferred and can be used in overleaf without troubles. This is an example [?] that is already formatted as expected.
- In case you intend to cite existing ALICE papers using bibtex, please note that all ALICE papers can be conveniently found in bibtex format at [?].
- Citing web pages is strongly discouraged: if there is a technical, peer-reviewed publication, you should cite that instead. However, if you must, the correct formatting for a web page is this one [?]; note that it is mandatory to add the date when the website was accessed.
- Please note that a set of standard latex newcommands was defined as part of this template that you may want to use. It contains regularly used expressions and formulae typeset following the ALICE standards, such as p_T , K_S^0 , $\sqrt{s_{NN}} = 5.02 \text{ TeV}$, $|\eta| < 0.8$ and $\langle dN_{ch}/d\eta \rangle$.
- Please add figures with short, simple filenames to the ‘figures’ folder in the overleaf project. An example figure can be found in Fig. ??.

Should you have any questions, suggestions or comments, please do not hesitate to write a message to: alice-editorial-board-chair@cern.ch.
